TOP MOBILE PAYMENT SERVICE PROVIDERS IN

TO THE COVID-19 CRISIS

DI IDILICATIONI DATE: OCTOBER 2020

PREFACE

A LIST OF ADVANTAGES

- yStats.com provides secondary market research: By using various sources of information we ensure maximum objectivity for all obtained data. As a result companies get a precise and unbiased impression of the market situation.
- Only reliable sources such as national and international statistical offices, industry and trade associations, business reports, business and company databases, journals, company registries and news portals are used as a basis for the analyses, statistical reports and forecasts.
- Our international employees research and filter all sources and translate relevant information into English. This ensures that the content of the original studies is correctly interpreted.
- yStats.com delivers all research results as PowerPoint files. All data can therefore be used directly for board presentations or be individually adapted.
- If required, yStats.com provides in-depth analysis for all research projects. Simply send us a request.

The licensing structure is as follows:

SINGLE USER LICENSE

allows one (1) user to access the downloaded report.

SITE LICENSE

• allows up to ten (10) users of a company within a specified geographic area (i.e. country) to access the downloaded report.

GLOBAL SITE LICENSE

allows up to ten (10) user of a company worldwide to access the downloaded report.

GENERAL METHODOLOGY OF MARKET REPORTS

Secondary Market Research

- The reports are compiled based on secondary market research. Secondary research is information gathered from previously published sources. Our reports are based on information and data acquired from national and international statistical offices, industry and trade associations, business reports, business and company databases, journals, company registries, news portals and many other reliable sources. By using various sources we ensure maximum objectivity for reported data. As a result, companies gain a precise and unbiased impression of the market situation.
- Cross referencing of data is conducted in order to ensure validity and reliability.
- The source of information and its release date are provided on every chart. It is possible that the information contained in one chart is derived from several sources. If this is the case, all sources are mentioned on the chart.
- The reports include mainly data from the last 12 months prior to the date of report publication. Exact publication dates are mentioned in every chart.

Definitions

• The reports take into account a broad definition of B2C E-Commerce, which might include mobile commerce. As definitions may vary among sources, exact definition used by the source (if available) is included at the bottom of the chart.

Chart Types

• Our reports include text charts, pie charts, bar charts, rankings, line graphs and tables. Every chart contains an Action Title, which summarizes the main idea/finding of the chart and a Subtitle, which provides necessary information about the country, the topic, units or measures of currency, and the applicable time period(s) to which the data refers. With respect to rankings, it is possible that the summation of all categories amounts to more than 100%. In this case, multiple answers were possible, which is noted at the bottom of the chart.

Report Structure

• Reports are comprised of the following elements, in the following order: Cover page, preface, legal notice, methodology, definitions, table of contents, management summary (summarizing main information contained in each section of report) and report content (divided into sections and chapters). When available, we also include forecasts in our report content. These forecasts are not our own; they are published by reliable sources. Within Global and Regional reports, we include all major developed and emerging markets, ranked in order of importance by using evaluative criteria such as sales figures.

Notes and Currency Values

- If available, additional information about the data collection, for example the time of survey and number of people surveyed, is provided in the form of a note. In some cases, the note (also) contains additional information needed to fully understand the contents of the respective data.
- When providing information about amounts of money, local currencies are most often used. When referencing currency values in the Action Title, the EUR values are also provided in brackets. The conversions are made using the average currency exchange rate for the respective time period. Should the currency figure be in the future, the average exchange rate of the past 12 months is used.

METHODOLOGY OF THE CURRENT REPORT

Report Coverage

- This report covers the South Korean payment market with a focus on the reaction of the top Mobile Payment Service Providers to the COVID-19 outbreak. It includes information related to payment methods used, transaction volumes, payment trends and recent COVID-19 related news of the top Mobile PSPs in South Korea.
- Our report focuses on the strategies adopted by South Korean Mobile PSP's during the COVID-19 pandemic. Information related to both remote and in-store payments.
- The data in our reports is mostly published from the previous 12 months. The exact date of publication of the source is stated on each chart. The time period which the data refers to differs by source.

Report Structure

- The Overview chapter opens the report, featuring a summary of payments market in South Korea. The latest trends and developments are summarized on the text charts and data highlights are provided on quantitative charts.
- The rest of the report is divided by the top three Mobile PSP's presented in the descending order of total users. Within each chapter, there is a company profile, text charts with relevant news and quantitative charts.
- Depending on data availability, the following types of market information are included: value and/or volume of transactions, number of users, payment methods used in-store and online, COVID-19's impact on the Mobile PSPs.
- Not all the mentioned types of information are provided for each of the covered Payment Service Providers due to varying data availability.

DEFINITIONS

The following expressions and definitions are used in this Online Payment market report*:

- COVID-19 / CORONAVIRUS
- ONLINE PAYMENT
- MOBILE PAYMENT
- POS PAYMENT
- ALTERNATIVE PAYMENTS
- E-WALLET/DIGITAL WALLET
- MOBILE WALLET
- INSTANT PAYMENTS
- B2C E-COMMERCE
- CONTACTLESS PAYMENT

An infectious disease triggered by an intense acute respiratory sickness. COVID-19 was first identified at the end of 2019 in Wuhan, China, and spread worldwide, becoming known as the coronavirus pandemic.

Transfer of money made over the Internet following a consumer's payment command, includes payments for product and service purchased in B2C E-Commerce and M-Commerce.

A wide definition of mobile payments includes payments made remotely in M-Commerce and proximity payments made instore, such as via QR code scanning and NFC technology.

Payments made at retail point of sale, i.e. in-store. POS systems or terminals are used to complete a POS payment transaction. POS payments are often used synonymously with in-store payments, proximity payments, in-person payments and card present payments.

Generally refers to payment methods other than credit card or bank card payments. Widely defined, alternative online payment methods include bank transfers and direct debit, digital wallets, pre-paid cards and private label cards, invoice, and digital currency. May also include cash on delivery and card schemes by local companies other than global card brands.

A digital account, allowing users to store money and use it in online or mobile transactions. The examples of E-Wallets or digital wallets include Alipay and PayPal.

A software solution that enables consumers to store payment credentials, such as credit or debit card information, and use the stored credentials to pay digitally for transactions made in-store, online or via mobile. Mobile wallets are installed on mobile devices which are used to complete payments. The examples of mobile wallets include Apple Pay, Samsung Pay and Google Pay. Mobile wallets are often included in the broader category of E-Wallets or digital wallets.

Electronic payment solutions for retail which are available 24/7/365 and thus result in immediate or close-to-immediate interbank clearing of transactions and crediting of the payees' accounts and confirm the payment to the payer after payment initiation.

The sale of products (and services) through electronic transactions via the Internet from businesses to consumers.

Contactless payments take place when tapping a mobile device or a payment card with a contactless payment functionality to a POS device. The data is transmitted via Near Field Communication (NFC).

Note: *the definitions used by the original sources might differ from the ones stated on this chart; the exact definition used by each source, where available, is included on the respective charts
